

Posting to the Team Dashboard

The TV in the engineering area shows meeting takeaways, team updates and the project board. You keep it current — about a minute a week.

OPEN THIS ON ANY OFFICE MACHINE — PHONE, LAPTOP, DESK PC

http://PerimeterConf:8770/drop

1. Pick **Team Updates** or **Meeting Takeaways**
2. Drag your file in, or tap to choose it
3. Tap **Post to the wall** — it appears within a second

WHAT WORKS

.docx .pdf .md .txt up to 25 MB.
Not: slides, spreadsheets, images, or scanned PDFs with no text layer.

A GOOD WEEKLY UPDATE

```
# Platform

## This week
- Media server on NVMe, no downtime
- Backup window 4 hrs -> 70 min

## Next week
- Live-migration smoke test Thursday

## Help needed
- Second pair of eyes on fencing
```

READS WELL ON A WALL

- **Use headings.** They become the coloured section labels.
- **Bullets, not prose.** One idea per line.
- **Front-load.** Only the first ~15 lines show without touching the screen.
- **Date the filename.** *Platform - week 31.docx*
- **Names on actions.** "Dana to finish the parser."

THE PROJECT BOARD — TAP ANY CARD

- **Move it** to another column, or press-hold and drag
 - **Tick milestones** as they finish
 - **Set progress** — ±10 / ±25, or 0/25/50/75/100%
 - **Change the due date** — ±1 day, ±1 week, or Today / +2 wks / +1 mo
- Everything writes back to the project file, so the board and the file never disagree.

THE CALENDAR

Tap the expand arrow for a full-screen month, or tap any day to see its schedule.

THE AREA-COVERAGE BOARD

Tap **Coverage** in the bottom bar. Each engineer is a card, each area a column. **Press-hold and drag** a card to the area that person is covering today. It saves itself and shows on every screen within a second.

IF SOMETHING GOES WRONG

Page will not load	You are on guest wifi. Use the office network.
Name does not resolve	Try the PC's IP instead of PerimeterConf.
"Only these file types work"	Export to PDF or Word first.
PDF shows up blank	It is a scan. OCR it, or post the original.
Anything else	Tell Kevin.

Nothing here is destructive. The worst you can do is post a file nobody needed, and removing it is one line in a folder. Questions → Kevin.
