

Formatting the Team Dashboard

How your files become what the wall shows. Two kinds of content: **documents** (Team Updates & Meeting Takeaways) and the **project board**.

DOCUMENTS — TEAM UPDATES & MEETING TAKEAWAYS

Same rules for both. Drop `.docx` `.pdf` `.md` `.txt` (up to 25 MB) into **data\team-updates** or **data\meeting-takeaways**. Newest first, rotates every ~25s.

MARKDOWN (.MD) — THE SIMPLEST

```
# Platform          ← first heading = card TITLE
## This week        ← heading = coloured section label
- Media server on NVMe ← bullet, one idea/line
- Backup window 4h -> 70m

## Next week
- Live-migration test Thursday
```

- **Title:** the first `#` line becomes the card title. Lead with one.
- **Headings:** `##`, `###` all render as the same coloured section label — `#` for the title, `##` for sections is all you need.
- **Bullets:** start a line with `-`, `*`, or `1.` (numbers become bullets too).
- **Paragraphs:** plain lines; a blank line breaks them.

WORD (.DOCX)

- **Heading 1 / 2 / 3** styles → section labels (the first becomes the title).
- **Bulleted / numbered list** buttons → bullets.
- **Tables** work in Word (up to 12×6) — the only way to get a table.

WHAT DOES NOT SHOW — KEEP IT PLAIN

- **Bold, italic, colour, font size** — stripped; the wall styles it for you.
- **Code blocks** (````` fences) — hidden entirely.
- **Markdown tables** (`| a | b |`) — print as raw text; use a Word table.
- **Images, links, buttons** — not shown (a link keeps its words, drops the URL).

READS WELL AT 4 METRES

- Lead with a `#` title, then `##` sections.
- Bullets, not paragraphs — one idea per line.
- **Front-load:** only the first ~15 lines show without touching the screen.
- Date the filename — *Platform - week 31.docx*.

THE PROJECT BOARD — DATA\PROJECTS\PROJECTS.YAML

A form, not prose. Each project is one `-` item under `projects:`.

Heading (card name)	<code>title:</code>
Sub-heading	<code>summary:</code>
Bullets	<code>milestones:</code> ("Next: ...") & <code>tags:</code> chips
Buttons	built in — tap a card to move its column, type Total / Complete, or set the due date

```
projects:
- title: Proxmox HA failover
  owner: Kevin Caughman
  status: In Progress
  total: 8
  complete: 5          # 100% -> moves to Done
  due: 2026-08-14
  tags: [infra, proxmox]
```

- status: **To Do** · **Selected** · **In Progress** · **In Review** · **Done**
- `total` + `complete` gives the % and remaining; or set `progress: 0-100`.
- Only `title:` is required; columns come from `board.columns`.

Nothing you drop is destructive. The worst you can do is post a file nobody needed, and removing it is one line in a folder. Questions → Kevin.
